DETAILED ACTION

1. This office action is in response to the application filed July 12, 2001.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 1-2, 6, 9-10, 14, 16-17, and 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Keller et al. (Keller) (U.S. Patent No. 6,490,661).

As per claims 1, 9, and 16, Keller teaches a multiprocessing computer system ("an apparatus"; title) comprising: a source tag identifies packets corresponding to a particular transaction initiated by source node ("a memory configured to store an

indication of one or more addresses"; col. 7, lines 41-43), when a first processing nodes sends a read command to a second processing node to read data from a designated memory location("wherein the memory is coupled to receive a first address of a read command"; col. 2, lines 48-50); and

memory controllers 16A-16D may comprise control circuitry for interfacing to memories 14A-14D. ("a control circuit coupled to the memory"; col. 5, lines 60-61), additionally, memory controllers 16A-16D may include request queues for queuing memory requests, generally, a processing node that has an associated cache memory responds to the Probe/Sre command by directing a ProbeRes packet to the source node 70 indicating a Miss("wherein the control circuit is configured to cause an issuance of one or more probes corresponding to the read command responsive to the first address missing in the memory"; col. 5, lines 61-63, col. 14, lines 30-34), and probe response, described later with reference to FIG. 12, may indicate whether or not a hit was detected for the requested cache back, generally, response packet 34 is used for commands that do not require transmission of the address during the carrying out of transaction("wherein the control circuit is configured to inhibit the issuance of one or

Art Unit: 2188

more probes corresponding to the read command responsive to the first address hitting in the memory"; cols. 7-8, lines 67-4).

As per claims 2, 10, and 17, Keller teaches response packet 34 may be used to transmit positive acknowledgment packets to terminate a transaction(" if the first address misses in the memory and the one or more probes result in clean probe responses, the control circuit is configured to store an indication of the first address in the memory"; col. 8, lines 5-7).

As per claims 6, 14, and 19, Keller teaches and probe response, described later with reference to FIG. 12, may indicate whether or not a hit was detected for the requested cache back, generally, response packet 34 is used for commands that do not require transmission of the address during the carrying out of transaction(" the control circuit is configured to cause a source of the read command to store a block addressed by the first address in a shared state if the first address hits in the memory"; cols. 7-8, lines 67-4) .

Allowable Subject Matter

4. Claims 3-5, 7, 8, 11-13, 15, 18, and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mehdi Namazi whose telephone number is (703) 306-2758. The examiner can normally be reached on Monday-Friday from 8:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mano Pedmanabhan, can be reached on (703) 306-2903.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305-9600.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks
